Trans. of [Academie des Sciences, Paris]. Comptes Rendus (France) 1960, v. 251, p. 1001-1003 (pub. by Gauthier-Villars et Cie., Paris).

DESCRIPTORS: *Nickel, *Hydrogen, *Folts, Crystal structure, Electron diffraction analysis, Electron microscopy.

The existence of a cubic face-centered nickel-hydrogen phase of parameter 3.70 Å, which had been discovered by X-rays, was confirmed by electron diffraction. A second phase of the same type but of parameter 3.83 Å was found under certain conditions. The patterns produced by these phases in thin foils exhibit a high stability. It can be assumed that they correspond to modifications in the thin nickel layers. (Author)
